FADE IN:

EXT. BELLONI AIR BASE - EARLY MORNING

The red sun slowly rises on the horizon as a Cessna 172 emerges from the darkness landing smoothly on the runway in the middle of the sunbeams. The sound of the plane cuts through the silence only disturbing the nearby ocean.

The amber sunlight reflects off the metal body of the plane and highlighting a red army Corps of Engineers insignia painted on the side.

The plane comes to gentle stop. The pilot climbs out of the plane wearing her moss green Army corps of engineers uniform.

The runway glistens from the sunlight, still wet from the morning dew.

Birds fly in the air above. Hawks, eagles, falcons travel the air free from bounds.

Note: We tried to get Tom Hanks for the Narrator role, but he was too expensive. Got Morgan Freeman instead.

NARRATOR

In 1903, the Wright brothers
watched the freedom of birds and
sought to expand Humanity's graphs
into the skies.

The pilot meets another army Corp member pushing a cart carrying 3 small containers with first aid stamped to the side of the containers.

The pilot unlocks the doors and helps load the medicine.

NARRATOR (CONT'D)

The Cessna 172. With over 44,000
Cessna 172 aircraft built, it
remains the most produced aircraft
in history.

The containers are pushed to the back of the plane atop soft cloth seats.

NARRATOR (CONT'D)

With the ability of comfortably
carrying 4 people, its 150
horsepower engine comes with an 800
mile range.

With the containers on board, she closes the plane doors and pre-flight check.

NARRATOR (CONT'D)

A ground-take off distance of less than 600 feet and an even smaller landing distance. This makes a fine aircraft for personal, business, or private travel.

The pilot takes off with the sun illuminating the maroon sky.

EXT. 10,000 FEET IN THE AIR

The Cessna flies smoothly through the air.

NARRATOR

Due to its light, sturdy, and durable design, Cessna flies gracefully through the skies.

Clear blue skies above and a distant blue ocean lay below the plane through clouds.

NARRATOR (CONT'D)

A single engine airplane with a cruising altitude of 10,000 feet and traveling at a 150 mph.

The plane dips below the clouds revealing an island.

NARRATOR (CONT'D)

The Cessna 172 holds the world's flight endurance record and is the highest light-sport aircraft in existence.

The flaps deploy, the plane's preparing for a landing.

NARRATOR (CONT'D)

The versatility of Cessna doesn't stop there. With the ability to land on ground and on water, the world's at your fingertips.

In a gradual descent, the wheels fold into the pontoons.

EXT. SEA LEVEL

The plane skids across the aquamarine water top creating a large wake behind the plane. The propellers reverse direction to produce reverse thrust.

The plane comes to slow stop. The pilot uses the propellers to move the plane slowly to the dock where people wait. People in uniform and locals.

NARRATOR

Nearly 120 years ago, the Wright Brothers looked to the heavens and opened the skies for human travel. Within 70 years of their achievement, we traversed our seas and raced into stars. What next adventure lies in wait?

The pilot exits the plane after anchoring it. She opens the doors and begins unloading the containers of medicine.

The other uniforms help distribute the medicine to the locals.

The Cessna floats gently on the ocean as the unloading is complete. The sun shines bright upon the Cessna sitting atop the aquamarine ocean, docked by an island covered in evergreen foliage.

NARRATOR (CONT'D)

Surely, we can do it again as we did in a time when our eyes looked to the heavens and with outstretched fingers. We touched the face of God.

FADE OUT.
